

India, making India's GCCs the nerve centres of global tech advancement. Backed by a talent pool that is skilled in technology, expanding presence in Tier II/III cities and strong policy support, GCCs are driving end-to-end product ownership, AI-led transformation and global leadership roles.

POLICY SUPPORT

The growth has been supported by a conducive policy regime. The Indian government permits 100% foreign direct investment (FDI) in GCCs across key sectors such as IT, BFSI and healthcare, enabling a seamless investment landscape.

In 2024, IT and semiconductor-related GCCs attracted at least \$2.2 billion in investments, driven by MNCs like Lam Research (\$1.2B) and NXP (\$1B). BFSI, aerospace, and pharmaceutical and healthcare sectors attracted \$1.5 billion, \$1 billion and \$437 million, respectively.

Tech giants such as Microsoft and Cisco are also driving the evolution in India. Microsoft has expanded its presence in India, focusing on cloud computing, AI development and cybersecurity research.

"Microsoft India Development Center (IDC), over the past 26 years, has taken pride in being a leading innovation hub in India. Our journey, which started from one centre in Hyderabad, has now expanded to other cities like Bengaluru, Pune and Noida, where our teams have consistently stood out for their customer centricity, scale and innovation velocity," says Rajiv Kumar, Managing Director and President, Microsoft IDC.

During his visit to India this year, Microsoft CEO Satya Na-

LEADERS GCCs leased the most office space in Bengaluru. Hyderabad was a distant second

THE FDI MAGNET

Industry	FDI Investment in Indian GCCs*	Focus Areas
IT & Semiconductors	2.2	AI, cloud, cybersecurity, semiconductor R&D
BFSI	1.5	Fintech, risk management, digital banking
Aerospace	1	Aircraft R&D, defence tech, AI-driven engineering
Pharmaceuticals and Healthcare	430 mn	Drug discovery, AI in healthcare, bioinformatics
Optical Technology	500 mn	Medical optics, precision engineering
