

“Capgemini, Deloitte, EY, and PWC have hundreds of thousands of employees. People who meet me have plans to double their manpower in three-four years. That is a scorching pace of development”

PIYUSH GOYAL

MINISTER OF COMMERCE AND INDUSTRY

“Microsoft IDC's journey started from one centre in Hyderabad, and has now expanded to other cities like Bengaluru, Pune, and Noida, where our teams have stood out for their customer centricity, scale and innovation”

RAJIV KUMAR

MANAGING DIRECTOR AND PRESIDENT, MICROSOFT IDC

of them, followed by Hyderabad, Mumbai and Delhi-NCR.

“For fintech players, India is not just a development hub—it’s a strategic location to build, test and scale up global products. Sectors such as BFSI, healthcare, consumer tech, telecom and manufacturing will witness highest levels of GCC-led innovation over the next two decades due to their reliance on data and the need for resilient, scalable technology infrastructure. The shift from operations to innovation is already under way and will accelerate,” says Gurjodhpal Singh, CEO, Tide (India), a fintech player.

The healthcare sector has also witnessed growth in recent years, with healthcare-related companies establishing their presence in India. This trend aligns with the evolving landscape and the heightened importance of healthcare services after a global pandemic.

Data available with Talent 500 further revealed that 15% of all GCC employees in India work in the healthcare and life sciences sector. At present, there are over 95 GCCs in the sector in India, employing more than 3,00,000 people. In addition, India is home to the GCCs of more than 70 global retail or consumer packaged goods companies employing over 85,000 professionals. The report says that the sector is one of the fastest growing GCC segments in India, with BestBuy, 7-Eleven, Giant Eagle, Lululemon, Neiman Marcus, TJX, Hy-Vee, Northern Tool + Equipment, Inspire Brands, Kraft Heinz, and Adidas opening their centres between 2020-2024.

Travel and transportation is another sector where the presence of GCCs is growing. Companies

force aligned with GCC needs. Also, Tier II and Tier III cities need world-class digital as well as physical infrastructure to attract GCC investments,” says Shah.

BEYOND TECH

The GCCs operating in India are diversifying beyond traditional sectors such as IT and software. Companies from pharmaceutical, manufacturing and AI are also setting up GCCs to drive digital transformation. Industry experts say the BFSI sector has historically played a pivotal role with large

as well as small financial services companies from the US and Europe expanding in India. Experts say the trend will continue with a second wave of BFSI companies emerging from the Middle East, Japan and the broader Asia region.

According to Talent 500, over 100 BFSI enterprises run more than 200 GCCs in the country. Most have multiple centres and collectively employ over 3,80,000 professionals, accounting for 20–25% of the total GCC workforce. Bengaluru leads in the number of BFSI GCCs, housing nearly 30%
