Suzlon faced pressures because of debt and low wind tariffs due to reverse bidding

54 |

A WALK THROUGH Suzlon One Earth in Pune with the enthusiastic Girish Tanti, the group's Co-Founder & Vice-Chairman, is an interesting experience. The 10-acre headquarters of the wind energy player runs on renewable energy. Predictably, the landscape is dotted with wind turbines, solar panels and photovoltaic cells. Tanti shows us a gallery tracking the evolution of Suzlon. In many ways, it's the story of wind energy in India.

Since 1995, when it was founded, to going global and then falling deep into debt, and now firing on all cylinders, Suzlon Energy has seen it all. But the best is yet to come, claims the top management. "It is a very interesting phase for the company, and we are hugely excited," says Tanti. Take the numbers for the last quarter of the 2025 fiscal when the company reported an 81% rise in Ebitda. In FY25, profit rose a humongous 213% to ₹2,071 crore and for the first time, a guidance is being put out for at least 60% growth across the board. It is also debt-free, a far cry from the days in 2015 when it had a debt of ₹17,500 crore.

Tanti is a happy man. "The focus is on growing the market," he says. As India doubles down on its focus on renewable energy—it wants to build 500 GW renewable capacity by 2030, up from 226.75 GW at present—Suzlon's man-

agement sees a clear opportunity. But how much of that potential can the company capture?

SUZLON 2.0

"I would say we are a lot more cautious today. That's perhaps the big difference," says Vinod Tanti, Chairman, Suzlon Group, the older and the more reticent of the Tanti siblings. That is a big change from the journey that started with a ₹1,500 crore IPO in 2005. The period immediately after that saw frenetic growth (somewhat unchecked perhaps) and expensive overseas acquisitions before the 2008 global financial crisis hit home. "It was because a large part of our revenue came from outside India. The first symptom was the cash flow constraint. For a project-based company, it became extremely challenging," says Vinod Tanti. The business involves paying in advance, selling on credit and a need

to give performance and execution guarantees. "The first things to get blocked are inventory and working capital," he adds.

Vinod, seated in his large room with younger brother Girish, emphasises on better risk processes. "For example, if we have a new product, there is now a clear process to define risk at each stage. Not everything is left to the technical team," he says.

Despite the multiple challenges Suzlon has been through, the
