

Leaders – Powering the 5 Trillion Dream

With bold vision and relentless drive, Utkarsh Gupta is building the clean energy infrastructure India needs for tomorrow. As the Founder & CEO of Gruner Group, Utkarsh is leading one of India's fastest-growing renewable energy enterprises, one that is deeply rooted in grassroots transformation while scaling with global innovation.

From launching large-scale Compressed Biogas (CBG) projects across the country to setting up a cutting-edge innovation and design hub in Germany, Utkarsh is reshaping the country's green energy playbook with clarity, conviction, and speed. Today, Gruner has secured 63 CBG projects—a milestone unmatched in the industry within such a short span. These projects form the foundation of a clean, circular economy by converting agricultural waste into clean fuel, creating value at every stage from farm to fuel station.

But the Gruner story is not limited to execution. It's about building a global energy company that blends engineering excellence with technological foresight. And at the center of this transformation is Utkarsh himself, a young, dynamic leader with a vision to decarbonize India's economy while creating long-term socio-economic impact.

Global Ambitions with German Precision

In 2025, the Gruner Group took a major leap by establishing Gruner New Inergie Deutschland GmbH in Osnabrück, Germany. This strategic international arm is poised to become the plant automation and operations backbone of Gruner's operations worldwide.

Gruner New Inergie GmbH will be responsible for:

- Developing in-house plant operation and optimization systems
- Designing a SaaS-based platform powered by AI/ML to enhance automation and real-time plant performance
- Providing international-standard engineering designs for machinery to be

manufactured in India

- Global expansion into solar, wind, and hydrogen energy

These German-engineered components will be produced in India and marketed globally through a network of planned sales offices, marking Gruner's emergence as a global clean-tech exporter.

Utkarsh's vision is to bring engineering-led discipline and technology-first thinking to India's bioenergy sector. By leveraging Germany's deep expertise in renewable technologies and combining it with India's scalability and entrepreneurial spirit, Gruner is creating a future-forward model for the world.

Grassroots Impact Meets High-Tech Thinking

While Gruner is scaling globally, its roots remain firmly embedded in rural India. Utkarsh is a firm believer that the future of clean energy lies not just in megawatts, but in empowering people.

His digital-first initiative, "Kisani," is a transformative platform that connects farmers directly with CBG plants, enabling them to sell Agri-waste and earn recurring income. By digitizing this informal sector, Gruner is bringing transparency, traceability, and trust to the biomass supply chain.

"Kisani is not just a procurement tool—it's an empowerment engine," Utkarsh says. "We're creating a rural economy around clean energy where the farmer becomes an energy entrepreneur."

Gruner's projects generate employment in rural communities, reduce stubble burning, and replace fossil fuels with a cleaner, indigenous alternative. This model of circular energy economics is what sets Gruner apart—not just as a business, but a mission of making rural women self-reliant.

Driving Collaboration with India's Energy Leaders

Recognizing the importance of public-private synergy, Utkarsh is also leading Gruner's efforts to collaborate with major Public Sector Units (PSUs).

These alliances will play a pivotal role in ensuring long-term offtake, policy support, and scalability for bio-CNG. As India moves towards cleaner mobility and industrial energy sources, such partnerships will serve as the backbone for a sustainable fuel economy.

A Vision for the Next Billion

In less than two years, Gruner has achieved over ₹4000 crore in booked orders, with a target to reach ₹100000 crore by FY2030.

Utkarsh's leadership is not driven by vanity metrics but by meaningful scale. "Our aim is not to become the largest—it's to become the most impactful," he shares.

With a strong bench of technocrats, sustainability experts, and international advisors, Gruner is now actively building capabilities beyond biogas, including solar, wind, and green hydrogen—with its German arm leading R&D and market entry strategy.

Recognitions and Milestones

- 63 ongoing CBG projects across India
- ₹4000 Cr+ in booked orders in under 2 years
- Formation of Gruner New Inergie Deutschland GmbH, Germany
- Next level AI/ML-based plant automation system
- Global manufacturing and export model under rollout
- Kisani platform launched to empower farmers
- Diversification into solar, wind, and hydrogen sectors
- Recognized by Hindu Business Line, IAM

"The energy transition isn't just about fuels—it's about people, process, and purpose. We're here to build something that empowers India and inspires the world."

— Utkarsh Gupta
