

FMCG'S ECO TURN

WITH THE IMPACT OF CLIMATE CHANGE ALREADY AFFECTING SUPPLY CHAINS AND MARKETS, INDIA'S LEADING FMCG COMPANIES ARE ADOPTING SUSTAINABLE PRACTICES. BUT CHALLENGES PERSIST

SUSTAINABILITY is increasingly becoming the only viable option for leading consumer goods companies in India. Climate change is affecting agricultural yield, impacting supply chains of the country's top fast-moving consumer goods (FMCG) majors, prompting major players like ITC, Hindustan Unilever Limited (HUL), Nestlé India and Dabur to

focus on adopting suitable practices as well as innovate new processes to go green.

Growing awareness among governments and companies is already changing how these businesses use fuels that harm the environment. According to global standards, the most direct sources of pollution fall under Scope 1 and Scope 2 emissions. These include greenhouse gases released from burning fuel on-site, refrigerant

CLEANER SUPPLY CHAINS

- 1 Globally, the FMCG sector accounts for a significant amount of greenhouse gas emissions
- 2 FMCG majors are under pressure to reduce their carbon footprint as consumers change their consumption behaviour
- 3 Rising awareness among consumers and authorities is making companies change policies to cut the use of polluting fuels
