

leaks and electricity used by the company.

Scope 3 emissions, however, are much broader. They cover the whole supply chain, from the goods a company buys to the waste it produces and how its products are transported. Tackling Scope 3 emissions is more complex but essential for achieving net zero, where a company balances the emissions it creates, with actions that remove or offset the same amount from the environment.

Take the case of homegrown ayurvedic products maker Dabur India. It has set an ambitious goal to become a net-zero emissions enterprise by 2045 and as part of the endeavour, it is eliminating coal from operations and aiming for 60% reliance on renewable energy sources for its Scope 1 and Scope 2 energy requirements.

150 | According to Chief Executive Officer Mohit Malhotra, turning its

GLOBAL DATA SHOWS FMCG MAJORS, INCLUDING THE ONES OPERATING IN INDIA, ARE A MAJOR SOURCE OF SCOPE 3 GHG EMISSIONS. FMCG GIANT NESTLÉ ADDED MORE CO₂ EQUIVALENT IN 2021 THAN ANY OF ITS PEERS

operations and supply chain green is not an option but an inherent part of Dabur's culture now. "Sustainability in the modern business world is about balancing consumer needs with environmental stewardship, a commitment Dabur has wholeheartedly embraced. This ongoing journey towards sustainability sees Dabur making significant strides, not only in creating eco-friendly products but also in greening its entire operations and value chain," he tells *Business Today*.

HUL, the largest FMCG company in India by revenue, is not resting on its laurels either. According to B.P. Biddappa, Executive Director and Chief People, Transformation, and Sustainability Officer at HUL, the company is integrating environmental and societal considerations into its business model, paving the way for a sustainable and responsible future.

"A testament to HUL's dedication is its significant reduction in environmental impact since 2008. The company has dramatically decreased CO₂ emissions by 98% per tonne of production, water usage by 47%, and total factory waste by 58%. HUL's sustainable sourcing practices also speak volumes, with 94% of paper and board, 81% of tomatoes, and 79% of tea being procured sustainably," he tells *BT*.

Additionally, HUL is chairing a working group under the Resource Efficiency and Circular Economy Industry Coalition (RECEIC), initiated during India's G20 Presidency in 2023. This collaborative effort, supported by the Ministry of Environment, Forest and Climate Change, aims to guide India's chemical industry towards a net-zero future, focusing on reducing Scope 3 emissions.

"In pursuit of a zero-waste business model, we are exploring new
