

not merely a construction resource, it's a long-term sustainability priority for the company and hence, it has introduced multi-pronged water management strategies that span both construction and post-occupancy phases.

These efforts are yielding measurable impact. "We've been able to cater to 96% of flushing requirements and 74% of landscaping needs using on-site treated water," Mohan shares. Around 42% of water is re-used on-site, reducing dependency on fresh sources.

"Godrej Properties stands out as one of the more progressive players in the real estate sector when it comes to sustainability," says M Ramakrishnan, Managing Director at Primus Partners. Citing the company's latest Business Responsibility and Sustainability Report (BRSR), he points out that its total Scope 1 and Scope 2 emissions per rupee of turnover are approximately one-thirtieth that of some of its larger peers.

Godrej Properties' commitment to sustainability is mirrored in its financial performance. In FY24, the company achieved a net profit of ₹747 crore, marking a 27% increase from the previous fiscal year. Total income rose to ₹4,334 crore, up from ₹3,039 crore in FY23, as per Tracxn.

The company created on-site material recovery facilities (MRFs), backed by a formal standard operating procedure for waste segregation. Each MRF is designed to segregate metal, wood, plastic, and debris at the source. These waste streams are then routed to authorised recyclers. "98% of construction waste is now either recycled or reused," says Mohan. The company even repurposes wet concrete into paver blocks and reuses topsoil, reinforcing circular economy principles.

Godrej Properties has undertaken both near-term and net zero targets which have been validated by the Science Based Targets initiative (SBTi). The results speak volumes. GPL has achieved a 37.5% reduction in Scope 1 and 2 emissions intensity—surpassing its initial 30% target—through renewable energy adoption and operational efficiencies. Site and marketing offices increasingly draw power from green electricity or on-site generation.

But the ambition doesn't stop

an ever-present risk, GPL has gone a step further by securing ISAE 3000 certification for its sustainability reporting. This international standard validates the integrity and effectiveness of internal ESG controls.

"This independent assurance reinforces our commitment to transparency and builds stakeholder trust," says Mohan. For investors, regulators, and customers, it is a signal that the company walks the talk on sustainability.

For Godrej Properties, sustain-

ROHIT MOHAN CHIEF DESIGN AND SUSTAINABILITY OFFICER, GODREJ PROPERTIES

MANUFACTURING REALTY

→ The company undertakes hydrological and floodplain analyses before breaking ground in flood-prone areas

→ Water scarcity is tackled with rainwater harvesting, dual plumbing, and partnerships with treated wastewater suppliers

→ In FY24, the company achieved a net profit of ₹747 crore, marking a 27% increase from the previous fiscal year

→ It has created on-site material recovery facilities, backed by a formal standard operating procedure for waste segregation

there. GPL has initiated a supplier decarbonisation program targeting Scope 3 emissions, the most complex to abate. "Already, 27% of our suppliers by spend in high-emission categories like cement and steel have committed to decarbonisation," says Mohan.

In a space where greenwashing is

ability is not a parallel function but a core business strategy. As climate volatility becomes the new normal and the call for responsible real estate grows louder, GPL's proactive, measured, and science-led approach offers a blueprint for the industry. **BT**
