

TAINABLE GLIDE PATH

TATA GROUP

- An overarching programme for all businesses

2020

► PROJECT AALINGANA, GROUP SUSTAINABILITY INITIATIVE TOWARDS NET ZERO, LAUNCHED

2025

► MORE THAN DOUBLE THE CONTENT OF RENEWABLE OR RECYCLED RESOURCES IN PRODUCTS

2030

► REPLENISH FRESHWATER & ZERO WASTE TO LANDFILL

► 25% REDUCTION IN ABSOLUTE CARBON EMISSIONS FROM 2020 BASELINE

2040

► REPLENISH MORE FRESHWATER THAN CONSUMED

2045

► NET-ZERO EMISSIONS ACROSS THE GROUP

SOURCE INTEGRATED ANNUAL REPORT FY24

Among corporate biggies, Reliance Industries (RIL) has set one of the most ambitious targets; it wants to become net carbon zero by 2035. This means that in a decade from now, all its operations, including refineries and chemicals, will be carbon neutral. It is building a new energy ecosystem by investing ₹75,000 crore.

India Inc. is not alone. Businesses globally are facing losses due to extreme weather events such as storms, floods and heat waves. Climate change could lead to a 16.9% loss in GDP by 2070 across the Asia Pacific region, with India projected to suffer a loss of up to 24.7% of GDP, according to a report by the Asian Development Bank released in October 2024.

India, though, is still at a nascent stage, with only a handful of conglomerates showing a commitment to mitigate the impact of climate change. It is a long journey ahead, says Sujata Mody, Founder CEO, ENVESYA, an environmental services company that helps industry decarbonise and transition to circular economy models. “Conglomerates are present across a spectrum of industries right from iron, steel, chemicals, paper and fertiliser to new-age technology and telecommunications. They have a large share in consumption of raw materials, energy, power and water. Any disturbance in availability of resources and infrastructure affects their operations and economic stability,” says Mody.

THE WAY FORWARD

Growing vulnerability to unpredictable weather events and changes in long-term climate patterns could affect companies and their supply chains. Aware of the risks, RIL has implemented strong business continuity management strategies under which each business conducts its assessment and makes tailored plans for risk management. Its facilities have been designed to withstand climate-related challenges. The company also implements prevention programmes to ensure the well-being of the workforce from climate events and maintains diversified
