change. At the COP29 meet in Baku in November 2024, countries had agreed to provide \$300 billion to developing countries to reduce the impact of climate change, but many have said this is not enough.

For much of the developing world, including India, this reversal is a concern, given the huge funding that flows in through the US and various multilateral agencies for climate finance.

In fact, one of the key concerns of the US' second withdrawal from the Paris Agreement is the pulling out of pledged funds. In 2021, the previous Joe Biden administration had committed to a fourfold increase

in the country's international public climate finance to developing countries to more than \$11 billion per year by 2024.

"The rollback of clean energy financing initiatives by the US sends a disconcerting signal to global climate efforts, particularly for large developing countries like India that rely on predictable financial and technological support to meet their net-zero and clean energy targets," says Aparna Roy, Fellow and Lead, Climate Change and Energy at the Centre for New Economic Diplomacy at the Observer Research Foundation.

Roy says that under the Biden administration, India
