

THE NEW GREEN ORDER

- 1 The US under President Donald Trump has gone back on several of its climate commitments
- 2 It has also withdrawn from the Paris Agreement that aims to limit global temperature rise to 1.5°C
- 3 India is pursuing its target of reaching net-zero emissions by 2070
- 4 Climate finance remains a key requirement for India as well as other developing countries
- 5 Experts note that India is well on the way to meet its targets, and should tap other sources for finance, collaboration

was able to access a suite of collaborative platforms and financial instruments. Further, the US Trade and Development Agency supported feasibility studies for clean energy projects in India, while technical support and concessional financing mechanisms were routed through the USAID's South Asia Regional Energy Partnership. "With the US backing away from international climate commitments, this ecosystem of support risks disruption," says Roy.

Rakesh Jha, Partner, Energy Sector Solutions, Sustainability and ESG at the advisory BDO India, says there will be some challenges due to the recent US policy moves and climate finance withdrawal, which will mean that India will require additional financing of 10-15%. "But, overall, India has been doing well on its decarbonisation plan. The results have been quite inspiring," he says.

DECARBONISATION ROAD MAP

India has among the most ambitious decarbonisation road maps. It aims to have 500 GW non-fossil fuel capacity by 2030 along with a broader target of net-zero emissions by 2070. It has made significant strides towards several of these goals and, in fact, updated the targets for its national climate action plan or the Nationally Determined Contributions for

THE ROLLBACK OF CLEAN ENERGY FINANCING INITIATIVES BY THE US SENDS A DISCONCERTING SIGNAL
