

ADANI GROUP UNVEILS INDIA'S FIRST HYDROGEN FUEL CELL TRUCK TO PROMOTE CLEANER TRANSPORTATION

Adani's natural resources division encourages sustainable transportation in logistics operations ahead of World Environment Day

Celebrated on June 5 every year, the World Environment Day aims to encourage sustainable practices.

Adani Enterprises Ltd (AEL), the flagship company of the Adani Group, has put its best foot forward towards sustainable transportation. The company has pioneered the deployment of hydrogen fuel cell technology in India. This commitment to innovation shows the company's dedication to reducing carbon emissions and advancing eco-friendly solutions.

Hydrogen Fuel Cell Truck

AEL flagged off India's first hydrogen fuel cell truck on May 10 in Raipur, Chhattisgarh, to promote cleaner transportation. These hydrogen-powered trucks will gradually replace diesel vehicles used in the company's logistics operations.

In collaboration with an Indian and international energy technology firm and a major auto manufacturer, Adani Group is developing hydrogen fuel cell battery-operated trucks for cargo transport. Each truck, equipped with smart technology and three hydrogen tanks, can carry up to 40 tonnes of cargo over a 200-kilometre range.

Hydrogen, the most abundant element, produces no harmful emissions. Hydrogen

Chhattisgarh Chief Minister Vishnu Deo Sai presents the key to the nation's first hydrogen-powered truck in Raipur on May 10.

fuel cell vehicles match diesel trucks in range and load capacity but emit only water vapour and warm air, with minimal noise. Since mining mainly uses diesel-powered machinery, switching to cleaner fuels will reduce emissions and noise. It will also help lower India's crude oil imports and carbon footprint. Notably, Adani Natural Resources (ANR) is the first in Asia to deploy Dozer Push Semi-Autonomous Technology, boosting both safety and sustainability.

A Gamechanger

Energy products such as coal, coke, crude

oil, liquefied natural gas (LNG), and liquefied petroleum gas (LPG) dominate India's import basket and account for over \$260 billion, which is over one-third of its total merchandise import bill for financial year (FY) 2023. India's per capita electricity consumption is only about one-third of the global average of per capita electricity consumption. In such circumstances and in view of the rising energy demand, India must look beyond conventional energy resources to meet the nation's vision to become energy-independent by 2047 while promoting environment-friendly energy resources. Adani's capital-intensive
