

pilot project will not only boost sustainable mining and transportation but will also help other industries to learn more about the applications of hydrogen-fuelled vehicles and machinery.

Commitment to Sustainability

"The launch of India's first hydrogen-powered truck in Chhattisgarh reflects the state's commitment to sustainability. Such initiatives will significantly reduce our carbon footprint and set a new standard for industry. Chhattisgarh is not only at the forefront in meeting the country's electricity demands but also leads by example in adopting sustainable practices," said Chhattisgarh Chief Minister Shri Vishnu Deo Sai while flagging off the first truck in Raipur.

"The initiative for hydrogen-powered trucks is a significant step towards Adani Group's commitment to decarbonisation and responsible mining. We are creating model mines with minimal environmental impact by incorporating autonomous dozer push technologies, solar power, digital initiatives, and tree transplanters to relocate trees."

Dr Vinay Prakash, (CEO), Natural Resources & Director, AEL.

Chhattisgarh CM Vishnu Deo Sai flags off the country's first hydrogen-powered truck for mining logistics in Raipur on May 10 in the presence of Sanjiv Kumar Katiyar, the Chief Managing Director of Chhattisgarh State Power Generation Company Limited; and Dr Vinay Prakash, Chief Executive Officer of Adani Natural Resources.

The state-owned Chhattisgarh State Power Generation Company Limited has appointed AEL as the mine developer and operator for the Gare Pelma III coal block in Raigarh district through a competitive bidding process. The truck will be used to transport coal from the Gare Pelma III block to the state's power plant. India produces nearly 900 million tonnes (MT) of coal annually, with the potential for even more growth. Hence, it is essential to adopt technologies that can reduce the environmental impact of coal mining and its transportation from the resource-rich states to the coal-consuming centres across India. Adani Group is one of the first movers to promote green technologies in the industry. The coal mining sector also holds the potential for utilising hydrogen for heavy machinery, trucks, drills, and excavators, among others, for cleaner operations. Implementing hydrogen technology can help align the coal sector with sustainability goals by providing a low-emission solution. This can reduce the carbon footprint associated with mining operations and contribute to overall environmental stewardship.

Step Towards Decarbonisation

"The initiative for hydrogen-powered trucks is a significant step towards Adani Group's commitment to decarbonisation and responsible mining. We are creating model mines with minimal environmental impact by incorporating autonomous dozer push technologies, solar power, digital initiatives, and tree transplanters to relocate trees. We aim to ensure affordable and reliable electricity for all while pioneering new standards in sustainable mining practices,"

BIG NUMBERS

- \$50 billion:** Size of likely investment by the Adani Group in green hydrogen in next 10 years.
- 3 MT:** Estimated production capacity of green hydrogen annually by Adani Group.
- 900 MT:** India's annual production of coal.
- 40 tonnes:** Cargo capacity of each hydrogen-fuel truck over a 200-km range.

said Dr Vinay Prakash, Chief Executive Officer (CEO), Natural Resources and Director, AEL. The project is a joint effort between ANR and Adani New Industries Limited (ANIL), which are a part of AEL. ANR will source hydrogen cells from ANIL, which is also involved in green hydrogen, wind turbines, solar modules, and battery manufacturing.

Investment in Green Hydrogen

Earlier, the Adani Group announced that it will invest more than \$50 billion over the next 10 years in green hydrogen and associated ecosystems corresponding to a capacity of up to 3 million tonnes (MT) of Green Hydrogen annually.

ANR produces and processes coal, minerals, and metals for industries and end users. ANR has a diversified business portfolio consisting of integrated resources management, iron ore, copper, aluminium, minerals, bunkering, LNG and rock phosphate. This is in line with the country's vision to achieve energy security and self-reliance in economic activities to improve the standards of living of the people of our vast nation. ANR has operations in India, Australia, and Indonesia.
