For India, By India

With government backing, Bengaluru-based Sarvam AI is building the country's first sovereign LLM, tailored for Indian languages

BY PALAK AGARWAL

► **IN 2022, CHATGPT'S** launch triggered a seismic shift in global tech adoption. The generative AI chatbot amassed over a million users in just five days—setting a benchmark. Not surprisingly, India emerged as the second-largest user base after the United States, underscoring the country's immense digital consumption potential.

Yet, India took some time to develop its own foundational model. Sarvam AI is set to change that.

In a landmark move, the Government of India has selected the Bengaluru-based company to build the country's sovereign large language model (LLM)—a project expected to be ready within six months.
