hormonal acne. Mankind Pharma's consumer healthcare segment generated approximately ₹706 crore in revenue in FY24, accounting for around 7% of the total revenue. The company plans to scale up this vertical, aiming to increase the contribution to 15%.

Beyond product expansion, Mankind is actively investing in digital campaigns and collaborating with healthcare professionals. Its plans include venturing into hormonal health supplements, advanced menstrual care, fitness nu-

trition, and even mental wellness, with a focus on supporting cognitive health and stress management.

These concerted efforts from major pharmaceutical players are clearly aligned with the burgeoning demand for women-specific healthcare solutions.

Another pharma major, Lupin, has also been quick on its feet. Anil Kaushal, Head of LupinLife, Lupin's consumer healthcare division, reiterates this focus, highlighting the launch Corcium D3 as a prime example of "commitment to

advancing women's health through innovative, targeted offerings."

WHAT DATA SHOWS

The transformation in the once underserved segment is driven by increasing health awareness among women, targeted government initiatives, and a distinct shift in consumer preferences towards personalised and tech-enabled solutions.

According to Market Research Future, the Indian women's healthcare market, valued at ₹7,000 crore in 2023, is projected to witness sub-
