

stantial growth, reaching ₹29,000 crore by 2035, registering a compound annualised growth rate of 10.6% between 2025 and 2035. This demand is further highlighted by recent data revealing the increasing prevalence of specific health concerns. For instance, a 2023 study published in the Journal of Reproduction and Infertility, drawing data from the NFHS-5, found that 18.7 per 1,000 married women aged 15–49 (married for at least five years) experience primary infertility. Furthermore, a 2024 report in JAMA Network Open, a medical journal, indicates that polycystic ovary syndrome (PCOS) affects a substantial 60% of Indian women aged 24–34 and 51% of those under 24, often presenting alongside conditions like obesity, insulin resistance, and non-alcoholic fatty liver disease (NAFLD).

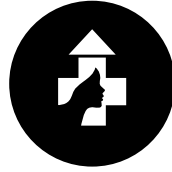

Dr. Neema Sharma, Director, Obstetrics and Gynaecology at Fortis Hospital, Vasant Kunj, corroborates this trend. “There has been a noticeable rise in gynaecological health issues among women in India, particularly after Covid-19. Conditions like PCOS have become more prevalent. Fertility issues are also rising. Menstrual irregularities have also increased, with many women reporting early-onset and persistent cycle disturbances,” she says.

MENTAL HEALTH AWARENESS

The growing recognition of women's health extends beyond physical ailments to include mental well-being. The Lancet Psychiatry's Global Burden of Disease study (2023) starkly revealed that one in five Indian women grapples with anxiety or depression, a burden intensified by the pandemic.

Krishna Veer Singh, CEO and Co-Founder of LISSUN, a mental health platform, highlights the

BUZZING SECTOR

▶ India's women's health market is growing rapidly, with major gaps in contraceptives, infertility treatments, and postmenopausal care

▶ Top pharma players—Mankind Pharma, Abbott, Cipla—are expanding women's health portfolios

▶ Mankind Pharma's acquisition of Bharat Serums & Vaccines has boosted its leadership of the sector

▶ Reproductive health management, valued at \$300 million, is the leading segment driving growth

▶ Biotech firms and start-ups are driving innovation with therapies for infertility and hormonal imbalances
