

apparent. Day-to-day tasks such as browsing, gaming, and editing 4K video feel similarly snappy. Yet, there's no denying the M3 chipset brings additional longevity. Battery life is great, with Apple's reliable 10-hour-plus claim holding true even with intensive use. Surprisingly, power-hungry apps like

Procreate drain less battery compared to the M2.

Cameras remain unchanged. A single 12MP rear sensor and a capable 12MP front camera with Centre Stage technology. They're good enough for casual use, but don't expect iPhone-like quality or

advanced camera setups. One notable new addition is Apple's integrated AI tools, known as Apple Intelligence. These smart features, previously requiring updates, now come pre-installed.

Budget phone with modern feel

With 16e, Apple shifts its approach to budget-friendly iPhones. The outdated iPhone SE is replaced with a sleek, modern design that closely resembles iPhone 14 and 15. It brings flagship-level performance and a solid camera while cutting just enough corners to make it more affordable. The phone features a 6.1-inch bright OLED display. While the A18 chip delivers top-tier performance, ensuring smooth multitasking and gaming, the biggest win is battery life. Apple promises up to 26 hours of video playback, and real-world usage comfortably lasts a full day, a major upgrade over previous budget iPhones. The 48MP camera uses sensor cropping to offer a 2x zoom without needing a second lens. In daylight, the camera excels, producing natural colours and strong dynamic range. At night, it performs well but doesn't outshine competitors like the Pixel 8. The biggest downside is the lack of an ultrawide lens. USB-C charging is a welcome update, but charging speed remains slow.
