

STALE PRICES: THE INDEX IS SUPPOSED TO REFLECT THE CURRENT PRICE OF A STOCK, BUT IF THE STOCK IS NOT TRADED EVERYDAY, THEN THE LAST TRADED PRICE WILL BE DAYS OLD THUS MAKING IT STALE AND LEADING TO THE INDEX BECOMING STALE TOO.

SUPPOSE A STOCK IS TRADING AT BID (BUY PRICE) 100 ASK (SELL PRICE) 120. IF NO NEWS COMES FOR SOMETIME WHICH CAN HAPPEN IN AN ILLIQUID STOCK, THEN A BUY ORDER COMES FIRST AT 120 FOLLOWED BY A SELL ORDER AT 100. THIS MAKES IT SEEM AS IF THE STOCK PRICE HAS FALLEN FROM 120 TO 100. THIS IS A TOTALLY SPURIOUS PRICE AND CONTAMINATES THE INDEX AND THE INDEX DOES NOT REFLECT THE CORRECT PICTURE.
