about how to sell them to like-minded, nature-loving, select buyers looking for green fairways, sparkling waterbodies and fresh, clean air; in fact, monitors measure air quality 24/7. Real luxury, one would say.

Nature is important. So is sustainability. Aashna's father, Ashwani Khurana, considers wastewater a resource. The sewage treatment plant at Karma Lakelands treats water from the adjoining development as well. The treated water feeds the golf course and the aquifers below. They have already revived many wells. Even the Vasant Kunj farm's sewage plant treats water from a couple of neighbouring farms as well.

Aashna and Bhisham are not exceptions. In the past four years, India's rich and famous have shopped for ultra-luxury homes like never before. Sales of units costing ₹10 crore to over ₹200 crore have gone up significantly. As traditional wealth competes

with new entrepreneurial money and family estates get sold for new addresses, the concept of a luxurious lifestyle itself is up for interpretation. The buyers are enlisting professionals to transform those houses into homes—developers, architects, interior designers, conservationists. But one common theme is sustainability and access to green views and plants.

Well-known tile manufacturers, Chetan and Rasika Kajaria requested Kohelika Kohli of K2India, a firm co-founded with her mother Sunita Kohli, to design their residence and do up its interiors. This is in DLF Farms in Chhatarpur in South Delhi. Location is always the first consideration for traditionally wealthy people, says Sunita. Add to that a conscious proclivity for the cultural and the sustainable, by both the
