configurations

certainties. Earlier this month, Porsche AG, a subsidiary of Volkswagen Group, delayed plans to launch all-electric models while extending the production of internal combustion engine and hybrid models.

Bentley and Lamborghini have also delayed plans to launch EV models amidst weak demand and tariff uncertainties. Despite this, luxury carmakers are optimistic about the demand for EVs in India.

For example, despite extending its 100% electrification target from 2030 to 2035, Mercedes-Benz is expecting EVs to make up 25% of its India portfolio. “The trajectory of luxury BEVs is promising. Mercedes-Benz is strategically focussed and tactically flexible regarding the pace

of BEV transition globally. Customers and market conditions will determine the pace of this transition. The key enablers will be charging infrastructure development, customer experience and value addition. Government policy consistency will also play a pivotal role in incentivising BEVs,” says Iyer.

According to BMW’s Brar, luxury electric cars will be not limited to urban markets going ahead. “Prospects from emerging markets are strengthening quickly in the medium to long-term. BMW and MINI dealerships have received many enquiries and bookings for the electric range from cities such as Chandigarh, Lucknow, and Kochi,” says Brar. **BT**
