

The 5.2 MW onshore wind turbines, some of the largest globally, are in Khavda, Gujarat.

growth is designed to last not just for the next quarter, but for the next generation.

Its ambitious roadmap aims to reach 50 GW of renewable capacity by 2030—more than 2.6 times its current capacity, in just half the time it took to reach the present milestone. Energy Storage Solutions (ESS) will be a key pillar in securing this growth path. Storage solutions ensure that renewable energy becomes a dependable and mainstream source, thereby encouraging clean energy transition. The incorporation of a significant amount of variable and intermittent renewable energy into the energy mix presents a challenge for maintaining grid stability and uninterrupted power supply. In this scenario, ESS can be used for reserving available energy that can be used during peak hours.

Hydro Pumped Storage Projects (PSP) have also emerged as key players in strengthening this ecosystem. Additionally, given the significant cost decline in the recent years, Battery Energy Storage System (BESS) is expected to become another crucial piece towards achieving grid integration.

Adani Green has commenced its first hydro PSP in Andhra Pradesh's Chitravathi (500 MW) and it is likely to be operational by 2027 allowing annual generation of 1 TWh+ with estimated 6.2 generation hours. The company has recently won PPA for development and operation of 1,250 MW PSP capacity from Uttar Pradesh Power Corporation Limited. It is also working with five states and aims to have PSP capacity of over 5 GW by 2030. The BESS strategy complements the company's existing solar,

wind, and hydro pump storage projects in the portfolio.

In a world that increasingly demands speed and scale in clean energy adoption, AGEL delivers both, and more. It brings to the table the infrastructure, innovation, and integrity required to position India as a global green powerhouse.

ESG: From Compliance to Competitive Edge

Environmental, Social, and Governance (ESG) principles are no longer an afterthought in the energy sector—they are a fundamental expectation. AGEL not only embraces ESG but transforms it into a strategic strength.

The company's entire operating portfolio is water positive, zero waste-to-landfill, and free of single-use plastics—a rare feat in the global energy industry. These distinctions are not ceremonial—they reflect operational discipline, technological foresight and ethical clarity.

AGEL has ranked #1 in ESG ratings for the power sector on India's National Stock Exchange (NSE). It also tops the FTSE Russell ESG global rankings within the Alternative Electricity subsector, standing tall among international peers. Additionally, CRISIL ESG has awarded AGEL the highest ESG rating in the Indian power sector for the fourth consecutive year.

But these accolades are more than badges—they are indicators of how deeply AGEL has integrated sustainability into business continuity, stakeholder trust and global competitiveness. In an age where capital, talent and regulation favour responsible businesses, AGEL's ESG leadership offers a compelling edge.

Renewable Capacity Growth (GW)

It demonstrates that doing good for the planet and doing well in business are not opposing goals, but two sides of a resilient future-proof strategy.

Leading from the Front

In an era defined by energy insecurity, climate urgency, and rapid urbanisation, Adani Green Energy Limited is writing a new chapter—where infrastructure, environment, and innovation converge. It is redefining what's possible in clean energy, not just for India but for the world.

AGEL doesn't chase the future. It builds it.

From Khavda's windswept landscapes to Kamuthi's solar fields, the company's projects are monuments to what ambition can achieve when rooted in responsibility. In a world still negotiating the terms of its green transition, AGEL has already crossed several milestones—quietly, purposefully and at scale. India's aspirations for a greener, more sustainable tomorrow need pioneers. With its unmatched execution capability, forward-looking governance and unwavering commitment to the planet, AGEL is not just participating in India's clean energy journey—it's leading it.

Khavda: At a Glance

The Project Scale

30 GW

Renewable energy capacity

87.4 billion units

clean energy to be generated

15,200+

Green jobs to be created

538 km

Project area - 5x the size of Paris

63.6 million tonnes

Targeted reduction in CO₂ emissions annually

17.4 million

Homes targeted to be powered annually

Emissions Avoidance equivalent to:

3,027 million

Carbon sequestered by trees

13.8 million

Cars off the roads

*26 GW solar energy, *60 million solar modules, *4 GW wind energy, *770 wind turbine generators

The plant will:

*Save 1,716 million litres of water

**Source: AGEL*
