legal, and luxury goods sectors.

132 | While ‘premium’ and ‘existing’ customers are embracing electric mobility with open arms, ‘non-premium’ and ‘near-premium’ customers are also taking the green leap, Pawah says. He adds that though cities currently lead in terms of demand, smaller markets are also seeing high EV demand. In 2023, BMW India witnessed a 325% surge in EV sales, selling 1,424 units.

Similarly, for Audi India, which has four luxury electric cars in its portfolio—Audi Q8 e-tron, Audi Q8 Sportback e-tron, Audi e-tron GT, and Audi RS e-tron GT—most buyers are aged below 40. “An influx of start-ups, young entrepreneurs, and a boost in the economy is making this possible,” says Dhillon. At present, EVs account for 3% of total sales in Audi’s portfolio.

SUSTAINABILITY

For customers in the luxury segment, sustainability has become synonymous with luxury. “The perception and affinities towards electric luxury cars are transforming. Today luxury car buyers are increasingly prioritising eco-consciousness, aligning their desire for premium vehicles with their commitment to reducing environmental impact,” notes Dhillon.

This aligns well with the luxury automobile manufacturers’ focus on sustainability. “Sustainability has rightly become a fundamental focus for all of us. In achieving this global change, mobility has a very important role to play,” observes Pawah.

According to Audi’s Dhillon, with an improvement in infrastructure and with automakers addressing anxieties about the range of EVs, customers are increasingly embracing the practicality of electric cars. “The shift towards electric luxury
