BMW has six electric vehicles in India, including the i7 (pictured)

BMW LEADS THE EV SPACE

- BMW saw a huge increase in EV car sales in FY24
- At present, more than 10 luxury electric car models are available in India

slew of launches slated for the Indian market. “As India moves toward a more sustainable automotive future, BMW Group India is well-positioned to capitalise on the rising demand for luxury EVs. With a strategic focus on expanding its EV portfolio, building a robust charging infrastructure, and leveraging its technological and brand strengths, BMW is set to remain a leader in the premium electric mobility space in India,” says Pawah.

Audi will launch only EVs from 2026, ending the production of ICE-powered vehicles by 2033. “Luxury EVs are at a pivotal stage in India, driven by the growing focus on sustainability, increasing government support, and evolving consumer preferences. While overall EV sales face temporary challenges, the luxury segment holds significant potential in India,” says Audi’s Dhillon.

Similarly, British luxury car manufacturer Rolls-Royce, which has one EV in India—the Spectre, priced at ₹7.50 crore—plans to go all-electric by 2030. Italian luxury car manufacturer Maserati plans to launch its first EV in India in 2025, Philippe Claverol, Head of Overseas Markets at Maserati, told *BT* earlier.

Jacques Esculier, Member of the Supervisory Boards at Daimler Truck AG and S&P Global, says if the necessary infrastructure is put in place, he’s confident that manufacturers will ramp up technology to make EVs more affordable, potentially even more so than traditional ones.

“The market is more than ready to shift from internal combustion engines to electric vehicles,” he adds. That is something carmakers seem to be betting on. **BT**
