

ATGL: A LEADING FORCE IN INDIA'S CITY GAS DISTRIBUTION AND DECARBONISATION EFFORTS

Adani Total Gas Limited (ATGL) is one of India's largest city gas distribution companies, operating in 34 Geographical Areas (GAs) across 95 districts. Serving over 850,000 Piped Natural Gas (PNG) connections and managing more than 550 CNG stations, ATGL has become a cornerstone of India's energy infrastructure. The company is co-promoted by the Adani Group and TotalEnergies, each holding 37.4% stake, while the public retains the remaining 25.2%.

ATGL has expanded its energy portfolio and diversified into sustainable energy solutions through its wholly owned subsidiaries, namely Adani TotalEnergies E-Mobility Limited (ATEL), which focuses on the development of EV charging infrastructure, and Adani TotalEnergies Biomass Limited (ATBL), which produces Compressed Biogas (CBG) from biomass waste. Additionally, ATGL has two 50:50 joint ventures: Indian Oil Adani Gas Private Limited (IOAGPL), which is involved in city gas distribution operating in 19 GAs, and Smart Meter Technologies Private Limited (SMTPL), which is engaged in the business of manufacturing gas meters. Moreover, ATGL holds a 5% equity stake in the Indian Gas Exchange (IGX) as an initial investor, underscoring its strategic foresight.

The company envisions the city gas distribution sector as pivotal to India's growth narrative and its decarbonisation ambitions. ATGL is fully aligned with the Government

of India's (GoI) objective of increasing the proportion of natural gas in the country's energy mix to 15% by the decade's end, thereby contributing to a more sustainable future.

Growth plans, diversification strategies and partnerships

ATGL is dedicated to delivering clean, affordable, reliable, and convenient energy solutions to its customers across domestic, commercial, industrial, and transportation sectors. In alignment with this vision, the company has ventured into LNG retailing for the transportation and mining sectors, thereby addressing decarbonisation objectives.

In the biomass business, ATBL is operating Phase-1 of what would be India's largest agri-waste to CBG plant in Barsana, near Mathura, with a total feedstock processing capacity of 600 TPD. ATBL has recently been awarded contracts to build a Municipal Solid Waste to CBG plant

in Ahmedabad and Rajkot, with work commencing soon. Under the SATAT scheme, the Government of India aims to produce 15 MTPA of CBG in the country, and ATBL is poised to make substantial contributions to this goal.

In EV charging business, ATEL has established a network of over 1,200 charging points across more than 200 cities nationwide, with a total charging capacity of around 17 MW. ATEL is now rapidly expanding its EV charging infrastructure to offer comprehensive coverage to customers in major cities and along highways.

With a forward-looking approach to emerging technologies, ATGL has started a green hydrogen blending pilot project within its CGD network in Ahmedabad and is actively exploring hydrogen refueling opportunities. The company is partnering with technology providers and OEMs to create and deploy innovative multi-fuel solutions.
