

RAJDIP GUPTA | MD & GROUP CEO | ROUTE MOBILE

Route Mobile is a cloud communications platform that offers a dynamic range of solutions

“Moving to cloud helped us grow”

What was the problem you were grappling with?

When we started our business in 2004, our biggest focus was to build our own Communications Platform as a Service (CPaaS). By 2011-12, we faced a unique challenge—our platform was hosted on servers that were deployed on-premises. This led to higher platform stability issues due to the high volume of transactions we were processing every month. We had to overcome this issue to meet our growth ambitions.

Whom did you approach for advice and why?

I reached out to my friend Mahesh Kanniah, who is a tech wizard and has deployed large IT infrastructure across various industries. I presented him with our situation and asked for his advice.

What was the advice you received?

Mahesh understood the challenge and suggested that we move our platform to cloud infra. This would help with higher availability, security, lower the manual dependence, and help us scale on-demand.

How effective was it in resolving the problem?

We started moving our infra to the cloud. Even though it required a large investment, I was confident that it would help us grow at a faster pace. We partnered with Amazon Web Services to leverage their cloud offerings and moved our platform.

Ever since, we have grown at a pace faster than the industry, we were able to onboard multinational enterprises; our platform became GDPR certified (EU certification mechanism) and passed even the most comprehensive audits. It helped us form partnerships with the likes of Meta and Google.

I am thankful to Mahesh for his solid advice at the right time. Later, he got formally involved with Route Mobile in the capacity of CIO, and today, he is helping us build our operator-focussed platform. **BT**
