ADAPTING TO A NEW ERA

THE EVOLVING NATURE OF BUSINESS EDUCATION BRINGS NEW CHALLENGES. THE FOCUS IS ON INTRODUCING TECHNOLOGY, FLIPPED CLASSROOMS, AND MAKING STUDENTS MORE INDUSTRY-READY

▶ **TECHNOLOGY HAS DISRUPTED** every sector, even education, and particularly higher education. It was one of the last bastions to remain largely unaffected. The pandemic, however, accelerated the disruption of higher education as well. During the pandemic, things like moving classes online were implemented out of compulsion. Now, with the rise of large language models and Gen AI that are becoming increasingly powerful in assisting students with learning, we're seeing a deeper transformation. The role of the faculty in the classroom is no longer what it once was. The fundamental shift I foresee is the emergence of high-quality, curated content that will be widely available outside the classroom. A student who is hungry to learn will find that content.

The concept of a flipped classroom model has been around for a while, and now it has the potential to become a reality. In this model, students learn as much as they can before attending the physical class.
