

“We need to bring high-quality seeds [to farmers] and need measures to cut costs and increase production. For instance, farmers scatter urea by hand... We will use drones and advanced technology to reduce fertiliser use”

National River Linking Project—it will reach 7 million hectares.

When the PM was the Chief Minister of Gujarat, he brought the water of the Narmada to several rivers. In Madhya Pradesh, we brought the water of the Narmada to the Gambhir, Shipra, Kali Sindh, and Parvati rivers.

The first requirement is irrigation. The second is seed production. Five scientific labs, under the Indian Council of Agricultural Research (ICAR), are working in this regard. This work needs more direction. Recently, the PM released 109 new seed varieties of 65 crops. For example, we have developed a millet seed that will yield a crop in 70 days, while typically it takes 110-120 days. This saves time and allows for a second crop.
