career counselling that matches students' skills and aspirations with emerging job markets and even predicts future career trajectories? Imagine AI-facilitated virtual classrooms that bring together students and faculty from all over the world, breaking down geographical barriers and creating truly global learning experiences.

This isn't science fiction. These technologies are emerging now, and they have the potential to revolutionise not just how we teach business, but how we conceive of business education itself.

Our challenge—and our opportunity—is to harness these tools to create a curriculum that doesn't just prepare students for the jobs of today but empowers them to generate the jobs of tomorrow.

INDIA RIDING THE AI WAVE

The global AI wave presents Indian B-schools with a choice. We can either ride this wave or get swept away by it. This journey won't be easy. It will require us to rethink everything—our curricula, our teaching methods, and even our definition of what a business leader should be. It will demand investment, not just in technology, but in our faculty, our research capabilities, and our industry partnerships.

But the potential rewards are immense. Imagine Indian B-school graduates who are not just job-seekers, but job creators in the AI economy. Think of Indian businesses that don't just adopt global AI solutions, but export Indian AI innovations to the world as well. Envision an India that leads, not follows, in the global AI revolution.

The future of business is being written in lines of code, and it is high time our B-schools became fluent in this new language. The question is not whether Indian B-schools will be transformed by AI. The question is when Indian B-schools will be transformed by AI and whether we will be the authors of this transformation.

To be frank, who better to create this AI-driven future of business education than India—a nation of dreamers, of innovators, of those who never give up? The global AI revolution in business schools isn't just a challenge for Indian institutions; it's an opportunity—an opportunity to leap into the future, redefine what business education can be, and shape the global business leaders of tomorrow. **BT**
