Here are two phones that offer more for less—flagship performance without breaking the bank

BY PRANAV DIXIT

APPLE iPhone 16 PLUS

₹89,900 onwards

The phone delivers more for less—a premium big-screen iPhone experience at a more affordable price point

REVIEW

The latest iPhone 16 Plus receives subtle yet impactful design updates over its predecessor, including a vertical rear camera arrangement, and new vibrant colour options. The aerospace-grade aluminium chassis feels light, and the matte finish resists fingerprints. The 6.7-inch Super Retina XDR display, unchanged from last year, delivers sharp visuals and vibrant colours. But the 60Hz refresh rate feels dated, though the display's peak brightness has been improved.

The new Camera Control button, while offering convenient features like pressure sensitivity and swipe gestures for adjusting settings, feels finicky at times, and has limited third-party app

► **SPECS: A18 CHIP; 6.7-INCH OLED SUPER RETINA XDR DISPLAY; 48MP FUSION AND 12MP ULTRA WIDE CAMERAS, 12MP FRONT CAMERA; STORAGE UP TO 512GB; iOS 18; 199 GM**

support as of now. The main and ultrawide cameras capture exceptional detail, particularly in low-light conditions. The only shortcoming is the lack of a dedicated telephoto lens.

Powered by Apple's new A18 Bionic chip, the iPhone 16 Plus offers a significant performance

boost over its predecessor, with enhanced multitasking and gaming. The battery lasts more than a day with regular use.

iOS 18 brings incremental improvements, but the real game-changer is Apple Intelligence, Apple's suite of AI-powered features. While it is expected to be fully realised in a later update of iOS 18, early glimpses of features like the new Siri, Photo Clean Up, and email summarisation showcase its potential to revolutionise how users interact with their iPhones.

The iPhone 16 Plus offers flagship-level performance at a more affordable price. **BT**
