

THE FIGHT PLAN

TATA MOTORS' STRATEGY

- It currently has five EV models: Tigor, Tiago, Nexon, Curvv, and Punch. While Nexon and Punch are the best-selling personal EVs, Tiago and Tigor are the best-selling fleet EVs
- For better focus, the company has spun off its EV business into a separate subsidiary, targeting a share of 30% EV penetration in its portfolio by 2030. It has also introduced separate showrooms for its EVs
- The company is actively seeking partnerships with domestic firms to procure lithium-ion cells
- Tata Motors was the first EV manufacturer to introduce EV models through its Pure EV architecture—acti.ev.
- To bring price parity, the company has offered discounts of up to ₹3 lakh in its EV models

JSW MG MOTOR INDIA'S BATTLE PLAN

- It currently has popular models like the ZS EV, Comet EV, and Windsor EV in its portfolio

- The company plans to launch one EV model in three to four months for the next three to four years
- The company plans to increase localisation through JSW's lithium-ion manufacturing plant in Odisha
- Through MG Select, the company aims to introduce electric vehicles to the affordable luxury segment

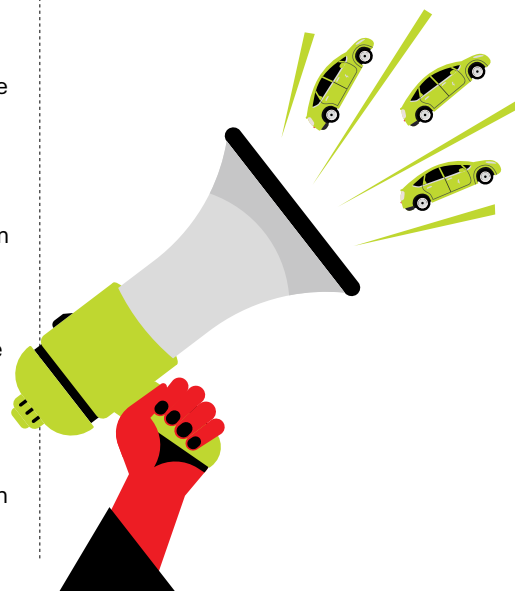

M&M'S EV MODEL

- The company currently has one electric model, XUV 400, in its portfolio
- It will be launching five new electric SUVs by 2026
- The company promises 450-km range and 60-80 kWh battery packs for the SUVs
- All the electric SUVs will be priced above the ₹15 lakh price segment

MARUTI SUZUKI'S EV APPROACH

- The company says it will launch its first EV during Auto Expo in January next year

- The EV will have a range of more than 500 km and will be priced above ₹10 lakh
- The company plans to introduce a 60 kWh battery pack in the new EV
- Also, it plans to build the entire EV ecosystem, including easy EV financing options and charging infrastructure
- The company is looking at EV penetration of 25% by 2030

lence in the wake of geopolitical tensions between India and China. Despite investing ₹7,000 crore in India, including on EVs like ZS EV and MG Comet EV, MG Motor faced allegations of financial irregularities.

Things stabilised when it grabbed an offer from steelmaker Sajjan Jindal's JSW Group to 'Indianise' operations by forming a partnership, JSW MG Motor India, which was announced in March this year.

Chairman Sajjan Jindal says his dream is to create a 'Maruti moment', referring to how Suzuki's partnership with Maruti in 1984 revolutionised the automobile industry in India. "We aim to do the same with MG," says Jindal. JSW Group will invest ₹40,000 crore in the JV, including setting up a lithium-ion battery cell man-

ufacturing plant in Odisha, its second manufacturing facility in Gujarat and more than doubling its total capacity to 300,000 units in the coming years. "As far as the joint venture goes, the thinking is very clear that we believe in growth. We want to take our sales to 4x of current sales in the next three to four years. We want to develop the whole EV ecosystem in the country. We want to be leader in green and sustainable mobility," says Chaba. (For a detailed story on JSW MG Motor India, turn to P54)

With a 'ruthless' focus on localisation, the JV aims to sell around 1 million EVs by 2030. "We will launch one product every four to six months between MG Channel and MG Select, mostly new energy vehicles," says Chaba.
