

HIGH ROLLERS

From ₹10-20 lakh

- In FY24, Tata Motors' Tigor was the highest selling model in this segment
- Tata Motors accounted for more than 90% of EV sales in the ₹10-20 lakh segment

Above ₹20 lakh

- Currently, Tata Motors and M&M don't have a presence in this category
- MG's ZS EV was the first offering in India in this segment, which was followed by Hyundai's IONIQ 5

SOURCE JATO DYNAMICS

we are going to support the customers,” said Banerjee.

He indicated that Maruti's EVs will be launched at a price range of ₹10-20 lakh. The company wants EVs to account for a quarter of its portfolio by 2030. While the company will introduce its EV in Q4 of FY25, mass production will begin only in FY26.

Sharma of Nomura observes that Maruti's entry into EVs will challenge Tata Motors on the price front. “With Maruti Suzuki commanding 41% of the total PV market, their entry into EVs could be a game-changer. Maruti's volume-driven approach and deep penetration in semi-urban and rural markets give it a unique advantage in scaling EV adoption,” says Sharma.

EV EXPORT HUB

In September this year, Ford Motor announced its return to the Indian market two years after its exit. The company, which began operations in the Indian market in 1995 via a partnership with M&M, had already invested more than \$2 billion before deciding to shut shop owing to an industry slowdown and poor sales. The company, which sold its Sanand, Gujarat, manufacturing plant to Tata Motors, had retained its Tamil Nadu plant

despite final discussions with Jindal.

Returning to India as part of a “Ford+Growth Plan”, Ford will export made-in-Chennai EVs to Southeast Asia. “We are announcing that we have submitted a Letter of Intent (LoI) to the Government of Tamil Nadu in India, confirming its intention to utilise the Chennai plant for manufacturing for export,” Kay Hart, President of Ford's International Markets Group, said in a statement.

Analysts say Ford's entry could help India become a global hub for EV manufacturing. Ford reportedly wants to shift its export base from China to India as it faces increasing competition from Chinese EV manufacturers.

Tata Motors, JSW MG Motor, M&M and Maruti Suzuki also have plans to export EVs. Then there's Tesla Motors. Will Tesla disrupt the market if it enters India? That remains to be seen as India's legacy carmakers are making rapid gains in EVs. It will also face formidable players such as China's BYD, which began as a battery maker and is today one of the world's largest makers of EVs. BYD leads Tesla in China's home market for EVs. **BT**
