als on new investments by Chinese firms dried up. “In the passenger vehicles industry, hardly any approvals have been given in recent times to Chinese investments. Apart from the authorities, even the local auto industry lobby is against a free run for Chinese automakers. Thus, it was prudent for MG to look for Indian partners,” says a senior auto industry executive who declined to be named.

According to Manish Raj Singhanian, President of the Federation of Automobile Dealers Associations (FADA), while the move to bring Indian partners on board may have been forced, MG was already well-positioned in the passenger vehicles (PV) space.

INTRODUCING MG 3.0

Rajeev Chaba, CEO Emeritus of JSW MG Motor India, is upbeat. After SAIC divested 51% stake, JSW owns 35% in JSW MG Motor India, some 8% stake is with Indian financial institutions, 3% is held by the company's dealers, and employees own 5%. Apart from ‘Indianising’ the company,

“The focus currently is on NEVs, with EVs at the forefront. By 2027-28 nearly 85% of our sales is likely to be NEVs, which may go up to 100% by 2030”

JSW—India's largest steelmaker—also has a slew of businesses that may prove handy in improving local value addition for MG. The stakeholders are investing more than ₹5,000 crore to fulfil MG's near-term needs. More such

investments are on the cards as it progresses towards manufacturing key components like EV cells and localising the tech. “The aim is to make available the best technologies to the Indian consumers, [and] eventually manufacture and design them in India. And offer them to the customers at the best price possible,” Jindal had said.

The road map for growth is clear. First, MG needs to expand its manufacturing capacity at the Halol plant to 120,000 units a year from the current 70,000, which Chaba claims has already been achieved. Second, it needs to quadruple annual sales by 2028 to close to 300,000 units from the current level of 70,000 units. Third, as demand for cars grows, MG plans to set up a second plant at Halol, with annual production capacity of 180,000 units to take local manufacturing capacity to 300,000 units. Fourth, increase localisation and help grow the EV market in India. And fifth, leverage its early mover advantage to position MG at the top of the pecking order in a larger future EV market in India.
