

BUILDING A HEALTHIER INDIA THROUGH QUALITY AND EXCELLENCE

India has now earned the status of becoming a global destination for health care services, with its state-of-the-art hospitals reflecting international quality, innovation, and standards in patient care. Dotted across major cities and regions in India, these hospitals are playing a very critical role in providing world-class medical services that are attracting patients from all parts of the world to these hospitals. The convergence of leading-edge technology, highly skilled medical professionals, and affordability in healthcare costs enables hospitals to emerge as one of the most highly competitive destinations on the global health map.

One of the distinguishing features of India's greatest hospitals is their commitment to clinical excellence. These institutions distinguish themselves in various fields, including cardiology, oncology, neurology, orthopedics, and organ transplantation, among many others. Multispecialty departments are designed to handle all aspects of a patient collectively under one roof. What is the great advantage of many hospitals? It is that it is very well-equipped with high-end technologies, including even robotic systems for surgery, advanced imaging and diagnostic procedures, and so on, which enable doctors to perform even the most complex surgeries with high precision and with shorter recovery times.

Just as good is the quality of doctors in such hospitals. India has a large number of very qualified doctors, and many of them have undergone training or have

experience in the world's best institutions. Their experts, paired with the ability to partner with people all over the world, promise updated medical research and treatment methods. Nurses and other subordinates are also trained to provide quality patient care. This is essential in maintaining an excellent level of service.

Another feature of the best Indian hospitals is accreditation. The majority of them earn the accreditation from international health care organizations like Joint Commission International (JCI) and National Accreditation Board for Hospitals & Healthcare Providers (NABH).

Such accreditation ensures that the hospital maintains international standards of safety, hygiene, patient rights, and clinical protocols. Such evidence of commitment to quality health care lends the hospital a great degree of credibility among the population and patients both domestically and internationally.

There is exponential growth in medical tourism from around the world because of this near perfect blend of state-of-the-art care at affordable prices.

Hospitals offer comprehensive packages including preoperative and postoperative care, accommodation, and even language support to make the experience a smooth one for foreign patients.

The new Indian hospitals reveal international giants blended with updated infrastructure, professional care, and focusing on the patient. That compromise between price and quality places them as leaders within the external health scenario and has therefore contributed significantly to India being seen more centrally as a premier medical destination.

Worthy mentions: These Institutions which are Recognised for their Commitment to Quality & Cutting Edge Treatments at par with Global Standards

- All India Institute of Medical Sciences, Delhi

Together, we can build resilient, equitable, and sustainable health systems where no one is left behind. May our collective efforts lead us towards a healthier and safer world.

SHRI J P NADDA
(Union Minister for Health)

India's huge size is again important to keep in mind. There are some states that, but I think we can do a leapfrogging now because we have the technology and people. We need more innovations. Our health system research needs more innovation and there the public-private partnerships can help

DR. SOUMYA SWAMINATHAN
(Principal Advisor Ministry of Health)

While working in tribal regions, doctors must know how to deliver a baby without the facility of sonography or blood transfusion, how to diagnose pneumonia without an X-ray and how to cure diarrhoea.

DR. RAVINDRA KOLHE
(India's One Rupee Doctor)

Private healthcare in India needs a lot of capital. It will come in the form of either large conglomerates' investments or from the private equity funds. In that sense, private equity money is a vital ingredient for the faster growth of the industry.

DR. RANJAN PAI
(Chairman, Manipal Health Enterprises)
