

BYD INDIA Making Waves, Quietly

July 2024 Sales:
342 units

Models:
Atto 3, e6, Seal

BYD India is likely to become a key player in the Indian EV space. With sales of 342 units in July, the company now holds 4.54% of the market share. The Atto 3 SUV and the newly-launched Seal sedan have helped BYD establish itself as a competitive brand, surpassing Hyundai in sales since April 2024. BYD's focus on premium EVs, coupled with consistent growth, suggests it is on a path to long-term success in India.

PCA MOTORS (Citroën India) Growing Fleet Demand

July 2024 Sales:
155 units

Model: eC3

PCA Motors, with its electric C3 hatchback (eC3), has been making inroads in the market, particularly among fleet operators. Although its sales dipped in July (155 units), there is growing demand because of bulk orders from ride-sharing company BluSmart and last-mile delivery company OHM E Logistics. The eC3, with its 320-km range, is a cost-effective solution for fleet buyers.
