

Make in India umbrella, salient features of the greenfield smart cities include potable and recycled water supply, reliable 24-hour power supply, effluent treatment plants, gas pipeline, an online application process to approve building plans, integrated city planning, telecom and optical fibre cable (OFC) network, single-window clearance, and e-land management system.

Construction of the 12 projects will start this year and is likely to be completed in three years. On purchasing land, investors would have to commence and complete production within three years.

Each industrial park will cater to a specific sector based on the ecosystem around it. For instance, the Khurpia project in Uttarakhand will focus on automobiles and auto components and engineering and fabrication, while the Rajpura-Patiala project in Punjab will focus on sectors including electronics, food and beverages, fabricated metal products, chemicals, machinery and equipment, textiles and apparel, rubber and plastic, and pharmaceuticals. The focus areas for the Hisar industrial area will be aerospace and defence, engineering and fabrication, food processing and ready-made garments while for Koppa in Andhra Pradesh, it would be renewables, auto components, metallic and non-metallic minerals, chemicals, engineering goods and textiles.

THE RESPONSE

“There’s quite a bit of enthusiasm around the industrial smart cities that have been completed and the offtake has been very good,” Bhatia tells *BT*, pointing out that Toyota Kirloskar is setting up a manufacturing plant at AURIC (Aurangabad Industrial City) in Maharashtra. “There are multiple examples of how they have helped

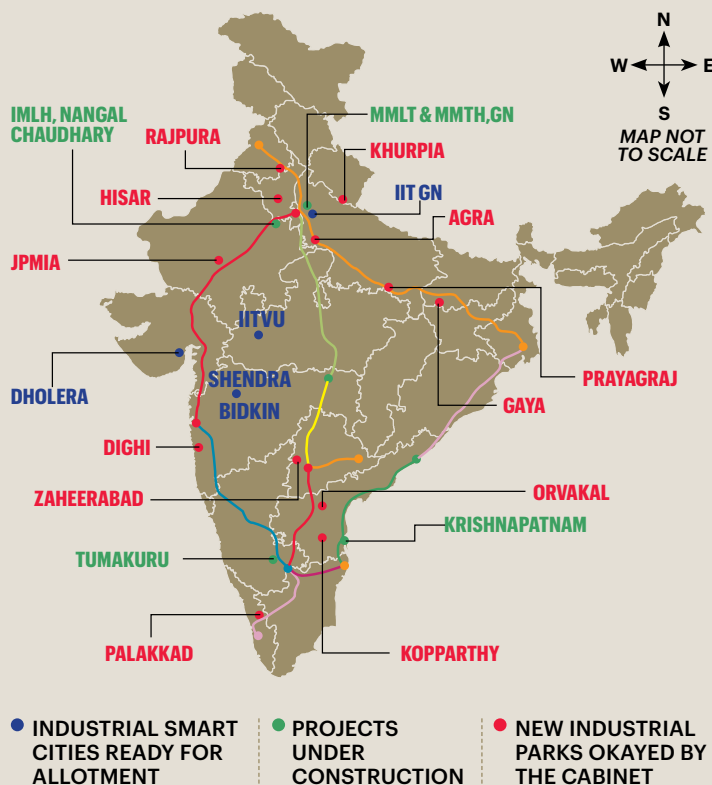

THE BIG NETWORK

- ▶ The Cabinet approved 12 industrial smart cities recently
- ▶ These will add to the four already constructed and another four under construction
- ▶ They will be connected to 11 industrial corridors to provide multi-modal connectivity
- ▶ Based on the plug-n-play model, they will enable investors to buy land and set up factories
- ▶ The objective is to make India a global manufacturing hub and create jobs

ON THE ANVIL

- ▶ The 12 new projects were announced in the Union Budget 2024-25
- ▶ Construction is expected to start this fiscal

No. of states	10
Connectivity to corridors	6
Project cost	₹28,602 crore
Investment potential	₹1,52,757 crore
Employment potential	1 million direct and 3 million indirect jobs
