“Technology is a force multiplier. Every nation is waking up to the fact that technology can help amplify the impact of both of those and many other industries,” Krishna said, referring to defence and finance. The shift, he added, means technology is becoming “as, or perhaps more important, even than finance” in driving future growth.

Krishna was careful to distinguish sovereignty from isolation. “It’s not exclusive. You can use many things from other places, but you do need to run some that you have your control over fully, so that nobody can turn it off, mismanage it, steal data from it, or apply the wrong security to it,” he said.

WHO OWNS THE INTELLIGENCE?

That anxiety fuelled intense debate around “sovereign AI.” Alibaba Chairman Joseph Tsai and investor Chamath Palihapitiya both argued that the future belongs to open-source models.

“The future is open source,” Palihapitiya declared, “because it provides total transparency into what’s happening underneath the hood.”

Tsai explained that for governments concerned with data privacy, open source allows them to “claim sovereignty and claim ownership of the model” by

deploying it on their own secure infrastructure.

CAN TRUST SURVIVE AUTOMATION?

The philosophical questions were equally pressing. In a packed roundtable featuring 31 media executives, the issue was not whether AI would transform journalism;
