

WEIGHT-LOSS SLOWDOWN

NOVO NORDISK'S OBESITY-DRUG sales boom cooled sharply in 2025, with global sales growth slowing to 6.4% from 25% a year earlier, even as India emerged as a key growth market, the company's annual review shows. The Danish drugmaker said Asia-Pacific sales rose 19%, led by India, after it launched Wegovy (Poviztra) and Ozempic, alongside oral GLP-1 drug Rybelsus. Global operating profit dipped 0.5% due to restructuring costs, prompting a company-wide overhaul and around 9,000 job cuts. With competition intensifying and patent expiries approaching, Novo Nordisk warned it is not promising a return to recent peak growth rates.

TROUBLE IN THE SKIES

INDIGO IS UNDER THE scanner of the Competition Commission of India (CCI) for abuse of market dominance (65% market share), leading to high fares. While the airline was let off by the DGCA with ₹22 crore in punishment and a warning to top officials for the December 2025 mass cancellation, the CCI investigations are going to look into the abuse of dominance. Investors say any strict punishment by CCI could further impact the company's earnings, already impacted by the geopolitical situation, capacity constraints by the regulator, and exchange rate volatility.

HOME STRETCH

THREE YEARS AFTER the government's strategic disinvestment in IDBI Bank started, it seems to be finally in the last stages. The government has received financial bids for the transaction, which includes the Centre and Life Insurance Corporation of India selling 60.72% stake in the bank. Officials remain hopeful that the sale would be completed soon but whether it happens by the end of FY26 or stretches into the new fiscal is anyone's guess. Either way, the government could earn over ₹35,000 crore from the disinvestment and it could set the stage for more such transactions in the future.
