Airports and Regional Transformation

A similar logic underpins the airport projects that have come online or are nearing completion. Navi Mumbai International Airport (NMIA), operationalised on December 25, 2025, is not just about easing congestion at Mumbai's existing airport. It is about unlocking economic growth across an entire region by creating capacity for passenger movement, cargo handling and multimodal connectivity.

With integrated logistics infrastructure, the airport is positioned as an economic anchor rather than a standalone aviation asset. It reflects a shift in how airports are being conceptualised, from transit points to engines of regional development that support domestic industry, services and exports.

That shift is even more pronounced in the North-East. The new terminal at LGBIA is expected to significantly enhance passenger capacity and connectivity. For a region long constrained by geography, improved air links shorten distances, integrate local economies with national markets and expand economic possibilities.

The Guwahati terminal also carries symbolic weight. Designed to reflect regional identity, it positions the North-East as a gateway to Southeast Asia, aligning infrastructure development with India's "Act East" vision while reinforcing the broader objective of balanced, self-sustaining regional growth.

When Logistics Becomes Policy

The growing importance of integrated infrastructure was underscored during the presentation of the Union Budget on February 1, when Finance Minister Smt Nirmala Sitharaman, while tabling her ninth Budget, cited the Adani Group-run Dhamra Port as an example of how efficient port-led

development can catalyse regional growth. The reference was brief, but instructive.

It reflected a broader policy shift where infrastructure is increasingly evaluated through the lens of outcomes. Throughput, efficiency and integration now matter as much as capacity. Ports, airports and logistics corridors are being
