viewed as interconnected components of a national supply chain, essential to reducing import dependence and strengthening domestic production.

In this framework, infrastructure is not about isolated landmarks. It is about reducing friction in the movement of goods and people, and in doing so, enhancing economic productivity and self-reliance.

Defence Manufacturing Enters the Equation

While ports and airports shape economic connectivity, defence manufacturing adds a strategic dimension. Recent tie-ups between Adani Defence & Aerospace and global players such as Brazil's Embraer and Italy's Leonardo point to India's intent to move up the defence value chain.

These partnerships align closely with the government's Atmanirbhar Bharat push in defence manufacturing, which emphasises domestic production, technology transfer and export capability. For India, defence manufacturing is no longer limited to meeting internal requirements. It is increasingly about building a globally competitive ecosystem that combines indigenous capability with international collaboration.

The timing of these collaborations is significant. As India expands its physical infrastructure, it is also investing in strategic capabilities that underpin national security, technological advancement and industrial depth.

Capital, Coordination and Confidence

Large-scale infrastructure requires more than financial investment. It demands coordination across multiple stakeholders, from regulators and state governments to local communities. Over the past decade, India's ability to execute complex projects has improved, supported by clearer policy frameworks and

On February 3, 2026, in New Delhi, Adani Defence & Aerospace and Italy's Leonardo announced a partnership to manufacture AW169M (left) and AW109 TrekkerM helicopters for armed forces.
