

# GMDC ENTERING NEW FRONTIERS, ENHANCING ENERGY SECURITY

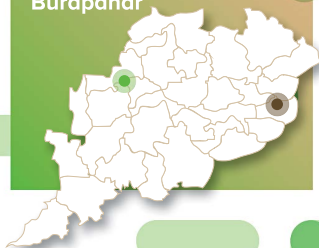

**G**ujarat Mineral Development Corporation Ltd. (GMDC), a six-decade old organisation, is India's No.1 merchant seller of Lignite and the nation's leading mining company. Besides Lignite, we are enabling access to Bauxite, Limestone, Manganese, Fluorspar and other minerals; fuelling Gujarat's industrial development. We are expanding our horizons by entering Odisha and venturing into Coal mining. We have a diversified power portfolio, comprising a thermal power plant and renewable energy installations generating wind and solar power.

## Towards meeting India's energy needs

We are proceeding with our strategic diversifications. We have recently won two coal blocks in Odisha at Burapahar in Sundargarh district and Baitarni West in Angul district, having 548 and 1,097 MT Geological reserves respectively. The Baitarni West Block is one of India's biggest blocks. We are confident to bank on our extensive expertise in Lignite when it comes to mining of Coal. Through these upcoming coal projects, we are seeking to address India's energy security.

## Building capabilities in high-demand metals

We are planning to operationalise our mine at Ambaji, one of the world's top multimetal mines. We seek to mine Lead, Copper and Zinc from here. Worldwide there is a high demand for these metals, but the reserves across the world are depleting fast. Mining and subsequently exporting them will help in building the nation's forex reserves. We are also envisaging setting up a beneficiation plant to make Lead, Copper and Zinc concentrates from the mined ores, which have extensive applications across diverse industries globally.

## Cementing new relationships

GMDC is stridently moving ahead to support the high level of activity going on in real estate and the Government's futuristic push towards creating smart cities and urban infrastructure. Limestone is a key component

for the construction sector, and our Lignite blocks in Kutch are home to huge quantities of cement-grade Limestone.

We seek to partner with a few large cement manufacturers. By setting plants at Kutch, manufacturers will gain locational advantages of timely, assured and plenty access to Limestone - and fuel, in the form of Lignite. They will also have access to an existing Cement manufacturing ecosystem, home to experienced professionals.

## Towards cleaner environment and expanding green footprint

GMDC is rooted to the cause of environment. We are driven to realise the vision of Honourable Prime Minister of making India a Green Energy nation. Our foray into clean, sustainable and renewable energy, which began more than a decade ago, is aimed at supporting the nation to reduce its dependence on fossil fuels. It seeks to provide greater thrust to Net Zero targets and combat climate change.

GMDC generates 200.9 MW wind power through installations at Kutch, Porbandar, Devbhumi Dwarka, Jamnagar, Rajkot and Bhavnagar. Aiming to harness the abundant Solar energy and to meet India's vast power requirements, we initiated and installed a 5 MW solar power project in 2011, on the reclaimed mined-out land of Panandhro Lignite Mine, Kutch.

With the right strategy, right culture and right geographical footprint, we are forging a path towards a sustainable and inclusive future. We remain set to deliver on our commitment, with a renewed sense of optimism, confidence and ambition.
