

RED HOT REAL ESTATE

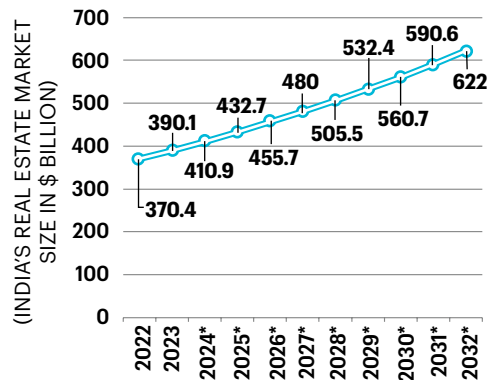

➤ The year 2024 has been a good one for the real estate sector ➤ That is also reflected in the fact that all firms that are part of the BT500 list have beaten the benchmark BSE Sensex

down, and as the market continues to evolve, we remain focussed on delivering not just homes but experiences that define the future of luxury real estate," Ohri adds.

Gaur and Agarwal concur. The focus on sustainability and smart home features is only going to gain further traction, they say. Sustainability is a driving trend, with eco-friendly, energy-efficient properties gaining popularity.

Projections indicate that the sector could reach \$1.3 trillion by 2034, says Agarwal of Signature Global. "By 2030, housing demand is anticipated to grow to around 70 million units, driven by urban infrastructure projects, favourable policies, and a resilient economy. As infrastructure projects accelerate and the economy expands, real estate's contribution to GDP is poised to rise, solidifying its position as a key pillar in India's journey towards sustained economic growth and urban modern-

isation," he adds.

According to Puri, Indian real estate will continue to grow in the decade to come because of factors like rapid, need-based urbanisation, economic development, and demographic shifts. "We will certainly see a stronger emergence of co-living, a much more robust rental market, and a golden age for environmentally friendly buildings. We can certainly expect to see the sector become a bigger and stronger factor in boosting India's overall GDP," he says.

Another trend that could drive growth is that while Tier I cities will likely maintain their supremacy, Tier II and III cities will gain prominence as real estate hubs. "This trend should be well entrenched by the end of the next two decades," Puri adds.

Additionally, the growth of co-working spaces and the integration of transformative technology like artificial intelligence (AI) in prop-

erty management and blockchain for transparency will also redefine the industry, say experts.

Today a section of homebuyers are ready to move away from city centres in search of bigger homes and affordable luxury amenities, says Swaroop Anish, Executive Director and CEO of the residential segment and business development at realty major Prestige Estates Projects.

Apart from changing priorities, rapid infrastructure development in roadways and public transport systems like metros has also fuelled this trend, leading to large-scale residential projects now being launched by prominent developers on the outskirts of major cities like Bengaluru or Delhi.

Developers are hoping for a quick revival in the affordable housing segment to make the resurgence in their fortunes. **BT**
