

# ADANICONNEX: LEADING INDIA'S DATA CENTER FUTURE WITH CHENNAI 1 FACILITY

India is the fastest-growing economy in the world. The country is experiencing a doubling of capacity every 2-3 years and is expected to reach a market size of over 4 GW by 2029. Additionally, India is undergoing a massive digitalisation push, with the internet economy poised to reach USD 1 trillion by 2030, driven by the increasing demand for data and facilities. Simultaneously, the cloud market, which doubled between 2020 and 2023 to reach USD 6.2 billion, is projected to expand further to USD 17.8 billion by 2027. This rapid growth in both the digital and cloud sectors underscores India's significant strides toward becoming a dominant player in the global economy.

## Chennai - Data Center Hub

Chennai, India's second-largest data center market, offers a substantial colocation capacity of 88 MW. The city's strategic advantages include high resilience, consistent power supply, and a robust talent pool. Key factors contributing to its appeal as a data center hub are the presence of six cable landing stations, dependable power sources, and a skilled workforce. Prominent areas such as Ambattur and Siruseri SIPCOT are central to data center activities, housing major operators like Ctrl S Data Center, Web Werks, Yotta Infrastructures, and AdaniConneX.

## AdaniConneX: Combining Local with Global Expertise

AdaniConneX, a 50:50 joint venture between the Adani Group and EdgeConneX, aims to establish a sustainable and socially responsible 1GW data center infrastructure platform by 2030. Combining global experience with local expertise, AdaniConneX stands out in the data center industry and has been globally recognised for its excellence, including receiving the Frost and Sullivan Company of the Year 2023 award in the South Asian Data Center Operation and Infrastructure category.
