

in rank. Zomato and PB Fintech have risen in the rankings, while Go Digit General Insurance, a new-age general insurance player, has secured a spot in the Top 250. The rise of new entrants highlights the broader trend of Indian consumers adopting digital and innovation within the market.

“These companies have benefitted from leveraging digital platforms to efficiently scale and meet consumer demands, a strategy that has become particularly effective in recent years. Given the continued emphasis on digital transformation and the adaptive capabilities demonstrated by these new-age companies, it is likely that emerging leaders from this space will continue to gain prominence over the next three to five years,” says Atul Shinghal, Founder & CEO of Scripbox, a digital wealth management platform.

22 | “As new-age companies emerge, investors are increasingly interested in them, especially with recent gains in the pre-IPO space. Companies like Swiggy have experienced notable growth, with Swiggy’s pre-IPO shares [being] actively traded... Over the next few years, sectors such as AI, electric vehicles, and sustainability innovations are likely to attract more investor attention during pre-IPO and IPO phases,” says Krishna Patwari, Founder and Managing Director of Wealth Wisdom India Pvt. Ltd.

Clearly, companies that can quickly adapt to market changes while focussing on sustainable growth, will likely succeed. The broader economic environment will also set the trend for these companies.

THE FUTURE TITANS

Market experts suggest that emerging sectors, particularly renewable energy, are poised to gain significant momentum in the

The overall trend among the BT500 companies shows that many FMCG firms have struggled to maintain or improve their ranking in 2024

coming years, though challenges persist. “The renewable energy sector, specifically solar, demonstrates strong growth potential, with installations reaching 90.8 GW by September 2024, up from 2.8 GW in 2014. However, the path to achieving India’s 500 GW renewable energy target by 2030 faces headwinds due to heavy import dependencies, with projected annual solar import bills reaching \$30 billion,” says Parakh.

“Top gainers in 2024 from the unlisted market were NSE, Tata Capital, Waaree Energies (now listed), and Vikram Solar. As a result, more enterprises in these areas, as well as new sectors like AI and EVs, are likely to gain investor attention in the future,” says Patwari of Wealth Wisdom.

Shinghal of Scripbox says that emerging sectors such as digital platforms, renewable energy, and logistics are poised for significant growth, thanks in part to evolving consumer behaviour, government policy, ESG-related awareness and tech advancements.

The digital transformation, that was accelerated during the pandemic, “has increased the reliance on and development of digital platforms across various industries”, says Shinghal.

SURGE IN TRADITIONAL SECTORS

According to Parakh, traditional sectors—particularly quality-focussed segments—show strong potential for a comeback in the next 12 months. “Manufacturing, especially in the IT and metals space, is displaying early signs of revival after recent underperformance,” he says.

Citing the ‘EY Global IPO Trends Q2 2024’ report, Patwari says, sectors like defence, renewable energy, industrial machinery, consumer goods, advanced mate-
