

Our Personal Finance Management modules power account aggregator based data analysis for major banks. And our mature categorisation engine drives custom advisory for the end consumer and a strong engagement and retention driver for our Business customers.

### **Claims and Benefits Processing**

For insurance providers, Perfios's AI-led solutions automate claims processing, offering real-time decision-making and fraud detection. With smart categorization and fraud detection modules, institutions achieve significant cost savings while delivering faster resolutions to customers.

Our flagship claims automation and fraud, waste and abuse (FWA) detection solution is capable of digitizing any format of claims including scanned images of hand-written bills and straight-through processing of claims. Customers have realized upwards of 10% of claims payout savings using the state-of-the-art fraud pattern recognition engine. The solution can identify fraud at a provider and doctor level to allow insurers to drive claims expense reduction initiatives in partnership with the healthcare ecosystem stakeholders.

### **Unlocking DPI**

Digital Public Infrastructure is perhaps the greatest innovation by any government across the world, and we are proud to work with various institutions to help our customers unlock its full potential. We set up the AA infrastructure which powers our advanced analytics and PFM engines for our customers. We help our customers to be onboarded on to Open Banking networks and are introducing new standards for the same across the world. This is in addition to the customisable and compliant consent management platform to make our customers DPDP ready.

### **What new innovations is Perfios working on to drive further value for its customers?**

At Perfios we strive to remain at the forefront of innovation, addressing emerging challenges in the financial landscape and beyond, with our solutions tailored to enhance operational efficiency and security. Here's how our latest innovations are driving new value:

#### **AI for Underwriters**

Our first-of-its kind product revolutionizes credit underwriting with generative AI, offering speed and accuracy. Its robust capabilities include cross-document analysis, fraud detection, and seamless compliance checks. Embedded credit policies facilitate pre-screening, while specialized LLM agents and Retrieval-Augmented Generation

(RAG) pipelines enhance risk identification, real-time data interpretation, and in-depth financial analysis. The AI layer within our credit analysis memo solution, provides a level playing field for all underwriters to extract actionable insights from the data; regardless of experience, personal biases and of course, eliminating potential mistakes.

#### **Deepfake Detection for Digital IDs**

As deepfake technologies pose significant risks to KYC processes, Perfios introduced a state-of-the-art detection solution with an accuracy rate of 98%. This innovation ensures the authenticity of critical documents, such as ID cards and application forms, thereby safeguarding institutions against identity manipulation and fraudulent submissions.

#### **TrustArmour - Digital Footprint and Device Management**

TrustArmour tackles complex fraud challenges, including advanced techniques such as SIM swapping, identity theft, and forged documentation, by detecting fraudulent activities at the earliest stages.

This solution tackles identity theft, account takeovers, and synthetic identity risks. With a focus on digital footprints, device fingerprinting, and behavioral assessments, we offer robust protection against a variety of frauds, ensuring your business stays secure.

#### **You often refer to yourself as a tech-fin, rather than fintech, how would you differentiate yourself from fintechs?**

Perfios has always positioned itself as a tech-fin, even before the term "fintech" became widely recognized as an industry. Our focus has consistently been on leveraging technology to solve complex challenges in the BFSI sector, rather than offering consumer-facing financial services. Unlike fintechs that focus primarily on digital payments, lending, or consumer finance, we create transformative, technology-driven solutions that have applicability across the financial landscape and adjacent sectors like Insurance, E-Commerce Marketplaces, Legal, HR Tech etc.

Our core differentiator is our technology-first approach. From data aggregation to credit assessment and fraud detection, our AI-driven analytics enhance accuracy, efficiency, and scalability. We integrate emerging technologies across our offerings, positioning ourselves as strategic partners to financial institutions. By leveraging Large Language Models (LLMs) and focusing on areas like underwriting, digital identity and background verification, we aim for near-

perfect accuracy in our processes.

At Perfios, we remain committed to innovation. We believe in consistently pushing the boundaries of what's possible to advance the technology that powers financial services across the globe.

#### **How is Perfios strategically positioning itself for a potential IPO?**

As Perfios continues on its growth journey, an IPO acts as a consequential milestone for us, and not the end goal we are fixated upon. Whether in preparation for a potential IPO, or in absence of an immediate filing, we are committed to focus on reinforcing the foundations that have spurred our growth. Our key objectives are centered on sustaining and enhancing our growth trajectory. This entails a steadfast commitment to product innovation, market expansion, and focusing on operational excellence, with strong systems and processes. We continue to prioritize financial health and governance structures to meet the rigorous standards expected of public companies. By focusing on these priorities, we aim to ensure that when the time for an IPO comes, it reflects our sustained growth, market leadership, and the intrinsic value we deliver to our stakeholders.

#### **You were the 2nd Unicorn of India in 2024, what does unicorn status mean for Perfios, and how does it shape the company's vision for the future?**

We have never chased valuations. Instead, our focus has always been on building sustainable value and demonstrating our long-term potential. Perfios is not an overnight success, we have persevered for 16 long years to get here. Our position as a global fintech leader has been years in the making, and I am thankful to our customers, our investors, our team of 1600+ Perfians and all our stakeholders, who've been part of this journey.

The Unicorn status is a reflection of our journey, values, and our unwavering commitment to delivering value to create a lasting impact in the industry. Looking ahead we remain focused on strengthening our bottom line, guided by financial discipline and a frugal approach. We are dedicated to scaling our impact, expanding into new markets and strengthening our global footprint. We ensure that every decision we make is carefully aligned with long-term value creation, enabling us to build a resilient and future-ready organization. At the same time, we continue to embrace agility and adaptability, enabling us to navigate the evolving dynamics of the financial ecosystem with precision and purpose.
