

Intelligent Engineering for a Sustainable Future

The last few years have seen a profound shift in how innovation is approached and applied, driven by the need to address urgent, real-world challenges. In an increasingly interconnected and digital world, purposeful innovation has emerged as the guiding principle for creating technology that serves humanity. The focus has shifted from merely developing new

tools to applying intelligent engineering to improve lives across industries such as AdTech, MedTech, Energy, Sustainability, and Connectivity. Hitachi India has been at the forefront of Digital Transformation (DX) and Green Transformation (GX), leveraging the expertise of GlobalLogic, a Hitachi Group Company, in intelligent engineering and purposeful

innovation to untangle complex problems and deliver solutions that have a meaningful impact. Purposeful innovation is no longer just about pushing the boundaries of what's possible; it's about ensuring that these advancements enrich people's lives, make cities greener, enhance mobility, and expand educational opportunities, particularly in underserved areas.

Transforming Healthcare with Purposeful Innovation

In the healthcare sector, the goal has always been to enhance patient outcomes and deliver technologies that make a difference where it matters most—saving lives. GlobalLogic's collaboration with a medical device company led to the creation of an AI-driven model that monitors the readiness of life-saving defibrillators. In situations where seconds count, having an always-on

device can mean the difference between life and death, exemplifying how innovation becomes purposeful when it directly addresses critical needs. This is part of a larger movement where healthcare is evolving rapidly. Technologies like Artificial Intelligence (AI) and Machine Learning (ML) are moving from being experimental to indispensable.

GlobalLogic's work with cochlear implants has helped develop software that enhances the performance of these devices, providing individuals with hearing loss a renewed connection to the world around them. It's an innovation that doesn't just push boundaries—it brings real improvements to the quality of life for thousands of people.

HealthConnect Connected Healthcare Platform

Empowering healthcare providers by integrating patients, medical devices, and systems, optimizing care coordination, and enhancing operational efficiency.

Intelligent Clinical Trials AI-Driven Clinical Trials

Streamlining clinical trials with AI and data analytics, improving recruitment and management to accelerate the development of new treatments.

Fostering an Intelligent Healthcare Ecosystem

How GlobalLogic is helping build a more connected, efficient, and patient-centered system

DeviceSure Medical Device Assurance

Ensuring medical devices meet safety and regulatory standards through automated testing, improving compliance and accelerating time to market.

Digital Front Door Patient Engagement Solution

Transforming patient interactions with an integrated platform for scheduling, telehealth, and monitoring, improving care experiences and provider workflows.
