▲ HARNESSING IMAGINATION: AI AND THE ARTIST

(From left) **Aayush Ailawadi**, Tech Editor, BTTV; **Abhishek Razdan**, Co-founder & CEO, Avtr Meta Labs; **Fabin Rasheed**, artist & digital art consultant; **Prateek Arora**, AI artist; **Dipankar Mukherjee**, Director & CEO, Studio Blo

The panel discussed how AI is transforming the creative landscape. "We believe AI replaces the camera, not the people behind it," Mukherjee said. Razdan introduced Naina, India's first AI-powered virtual influencer, to show AI's potential to revolutionise the entertainment industry, while also highlighting the global implications of AI-powered content creation

Fabin Rasheed, an artist known for experimenting with 'Indo-futurism', described AI as a tool that amplifies individual creativity. AI has made his craft more inclusive and accessible, and has transformed the creative process. "AI unlocks the ability to visualise seemingly impossible concepts without needing massive teams or years of work," he added

Arora, who was of the opinion that AI decentralises the creative process, said, "Once, you needed to move to media hubs to tell your stories. Now, with AI, you can create Marvel-level visuals from your home." The artist also said that AI has the capacity to break down traditional barriers, especially financial and geographical ones, and helps in creating new art forms
